DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the roller chain comprising two or more longitudinal chain portions of claim 3, line 2 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 3. Claim 3 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. It is unclear from the specification what "a roller chain comprising two or more longitudinal chain portions" refers to.
- 4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 09/893,109 Page 3

Art Unit: 3682

5. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

6. Claim 1 recites the limitations "the axis" in line 15, "the overall width" in line 16, and "the thickness" in line 19. There is insufficient antecedent basis for these limitations in the claim.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent Document 7-83290.

The Japanese document discloses a chain with inner and outer links 13,14 with a bushing 12 and a pin 11, a rigid roller 15 and an elastic roller 16. As shown in Figure 5, the elastic rollers are arranged in a zigzag pattern in a longitudinal direction of the chain. The elastic roller, as shown in Figures 2 and 4, is approximately 20% of an overall width of the roller assembly along a longitudinal axis of the roller assembly, and as shown in Figure 6 varies in thickness from approximately equal to the thickness of rigid roller to approximately 1.5 times as thick as the rigid roller, i.e. 0 to 50% of the thickness of the elastic roller, which comprises 5 to 25% of the thickness of the elastic roller. While the Japanese document does not show precise ranges of width ratios in the drawings, the

3082

Page 4

to one having ordinary skill in the art at the time the invention was made to utilize the

present disclosure does not show any unexpected results. It would have been obvious

claimed ratios of width and thickness, since it has been held that where the general

conditions of a claim are disclosed in the prior art, discovering the optimum or workable

ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Conclusion

9. The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure. The prior art shows various roller chains utilizing elastic rollers in

conjunction with rigid metallic rollers, including US Pat. Nos. 5,943, 855 to Morimoto et

al. and 4,428,739 to Shimano.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Justin Stefanon whose telephone number is 703-305-

1945. The examiner can normally be reached on Mon-Fri 6 - 3:30, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, David A. Bucci can be reached on 703-308-3668. The fax phone numbers

for the organization where this application or proceeding is assigned are 703-305-7687

for regular communications and 703-305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

1113.
